

# DATA LINKS™ PRO

DataLinks™ Pro is a desktop reporting and analytics solution that gives you the ability to build virtual data warehouses on your desktop. Choose fields from disparate data sources, whether located on your desktop, a company server, or the web. Build a relationship between the chosen fields, and within minutes create a merged dataset to generate intricate reports and/or dashboards.

DataLinks™ Pro also makes it easy to share information with others. In many companies, only a few key IT and Business professionals have the knowledge and the ability to create and maintain reports. As the demand for custom reports and analysis grows, many of these key professionals struggle to keep up with the abundance of requests. Equipped with DataDictionary, DataLinks™ Pro gives you the ability to create custom views, assigning names to tables and fields that accurately describe the data they represent. These views can then be made available to employees, managers or entire departments, affording them the luxury to independently gain access to the information that they need. With views created specifically for their needs, individuals will be able to work independently to create their own ad hoc queries and reports in a controlled and safe environment. The volume of requests that burden report writing IT and Business professionals will dramatically decrease.

DataLinks™ Pro Relationship Builder
